abuse case

See Also: use case

A use case in which some actors with malicious intent are causing harm to the system or to other actors.

acceptance criteria

Ref: ISO 24765

The criteria that a component or system must satisfy in order to be accepted by a user, customer, or other authorized entity.

acceptance testing

Ref: After ISO 24765  See Also: user acceptance testing

Formal testing with respect to user needs, requirements, and business processes conducted to determine whether or not a system satisfies the acceptance criteria and to enable the user, customers or other authorized entity to determine whether or not to accept the system.

accessibility

Ref: After ISO 25010

The degree to which a component or system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.

accessibility testing

Ref: Gerrard

Testing to determine the ease by which users with disabilities can use a component or system.

account harvesting

The process of obtaining user account information based on trial and error with the intention of using that information in a security attack.

accuracy

Ref: ISO 9126  See Also: functionality

The capability of the software product to provide the right or agreed results or effects with the needed degree of precision.

accuracy testing

See Also: accuracy

Testing to determine the accuracy of a software product.

acting (IDEAL)

See Also: IDEAL

The phase within the IDEAL model where the improvements are developed, put into practice, and deployed across the organization. The acting phase consists of the activities: create solution, pilot/test solution, refine solution and implement solution.

actor

User or any other person or system that interacts with the test object in a specific way.
actual result

Synonyms: actual outcome

The behavior produced/observed when a component or system is tested.

ad hoc reviewing

Ref: After ISO 20246

A review technique carried out by independent reviewers informally, without a structured process.

ad hoc testing

Testing carried out informally. No formal test preparation takes place, no recognized test design technique is used, there are no expectations for results and arbitrariness guides the test execution activity.

adaptability

Ref: After ISO 25010

The degree to which a component or system can be adapted for different or evolving hardware and software environments.

Agile Manifesto

A statement on the values that underpin Agile software development. The values are: individuals and interactions over processes and tools, working software over comprehensive documentation, customer collaboration over contract negotiation, responding to change over following a plan.

Agile software development

A group of software development methodologies based on iterative incremental development, where requirements and solutions evolve through collaboration between self-organizing cross-functional teams.

Agile testing

See Also: test-driven development

Testing practice for a project using Agile software development methodologies, incorporating techniques and methods, such as extreme programming (XP), treating development as the customer of testing and emphasizing the test-first design paradigm.

alpha testing

Simulated or actual operational testing conducted in the developer's test environment, by roles outside the development organization.

analytical test strategy

A test strategy whereby the test team analyzes the test basis to identify the test conditions to cover.

analytical testing

Testing based on a systematic analysis of e.g., product risks or requirements.

analyzeability

Ref: After ISO 25010

The degree to which an assessment can be made for a component or system of either the impact of one or more intended changes, the diagnosis of deficiencies or causes of failures, or the identification of parts to be modified.
anomaly

Ref: IEEE 1044  See Also: detect, error, fault, failure, incident, problem

Any condition that deviates from expectation based on requirements specifications, design documents, user documents, standards, etc., or from someone's perception or experience. Anomalies may be found during, but not limited to, reviewing, testing, analysis, compilation, or use of software products or applicable documentation.

anti-malware

Software that is used to detect and inhibit malware. See also malware.

anti-pattern

Repeated action, process, structure or reusable solution that initially appears to be beneficial and is commonly used but is ineffective and/or counterproductive in practice.

API

Acronym for Application Programming Interface.

API testing

Testing performed by submitting commands to the software under test using programming interfaces of the application directly.

assessment report

See Also: process assessment

A document summarizing the assessment results, e.g., conclusions, recommendations and findings.

assessor

A person who conducts an assessment. Any member of an assessment team.

atomic condition

A condition that cannot be decomposed, i.e., a condition that does not contain two or more single conditions joined by a logical operator (AND, OR, XOR).

attack vector

A path or means by which an attacker can gain access to a system for malicious purposes.

attack-based testing

See Also: fault attack

An experience-based testing technique that uses software attacks to induce failures, particularly security related failures.

attacker

See Also: hacker

A person or process that attempts to access data, functions or other restricted areas of the system without authorization, potentially with malicious intent.

attractiveness

Ref: ISO 9126  See Also: usability

The capability of the software product to be attractive to the user.
audit
Ref: After IEEE 1028
An independent examination of a work product, process, or set of processes that is performed by a third party to assess compliance with specifications, standards, contractua agreements, or other criteria.

authentication
See Also: authorization
A procedure determining whether a person or a process is, in fact, who or what it is declared to be.

authorization
See Also: authentication
Permission given to a user or process to access resources.

automated testware
Testware used in automated testing, such as tool scripts.

automation code defect density
See Also: defect density
Defect density of a component of the test automation code.

availability
Ref: After ISO 25010
The degree to which a component or system is operational and accessible when required for use.

balanced scorecard
See Also: corporate dashboard, scorecard
A strategic tool for measuring whether the operational activities of a company are aligned with its objectives in terms of business vision and strategy.

behavior
The response of a component or system to a set of input values and preconditions.

benchmark test
Ref: After IEEE 610
(1) A standard against which measurements or comparisons can be made. (2) A test that is used to compare components or systems to each other or to a standard as in (1).

best practice
A superior method or innovative practice that contributes to the improved performance of an organization under given context, usually recognized as “best” by other peer organizations.

beta testing
Synonyms: field testing
Simulated or actual operational testing conducted at an external site, by roles outside the development organization.
big-bang testing

Ref: After IEEE 610  See Also: Integration testing

An integration test approach in which software elements, hardware elements, or both are combined all at once into a component or an overall system, rather than in stages.

black-box test technique

Synonyms: black-box technique, specification-based technique, specification-based test technique

A procedure to derive and/or select test cases based on an analysis of the specification, either functional or non-functional, of a component or system without reference to its internal structure.

black-box testing

Synonyms: specification-based testing

Testing, either functional or non-functional, without reference to the internal structure of the component or system.

blocked test case

A test case that cannot be executed because the preconditions for its execution are not fulfilled.

botnet

A network of compromised computers, called bots or robots, which is controlled by a third party and used to transmit malware or spam, or to launch attacks.

bottom-up testing

See Also: integration testing

An incremental approach to integration testing where the lowest level components are tested first, and then used to facilitate the testing of higher level components. This process is repeated until the component at the top of the hierarchy is tested.

boundary value

A minimum or maximum value of an ordered equivalence partition.

boundary value analysis

See Also: boundary value

A black-box test technique in which test cases are designed based on boundary values.

boundary value coverage

The coverage of boundary values.

branch

A transfer of control from one location to a different location in the code.

branch coverage

The coverage of branches.

branch testing

A white-box test design technique in which test cases are designed to execute branches.
build verification test (BVT)

See Also: regression testing, smoke test

A set of automated tests which validates the integrity of each new build and verifies its key/core functionality, stability and testability. It is an industry practice when a high frequency of build releases occurs (e.g., Agile projects) and it is run on every new build before the build is released for further testing.

burndown chart

A publicly displayed chart that depicts the outstanding effort versus time in an iteration. It shows the status and trend of completing the tasks of the iteration. The X-axis typically represents days in the sprint, while the Y-axis is the remaining effort (usually either in ideal engineering hours or story points).

business process-based testing

An approach to testing in which test cases are designed based on descriptions and/or knowledge of business processes.

call graph

An abstract representation of calling relationships between subroutines in a program.

Capability Maturity Model Integration (CMMI)

Ref: CMMI

A framework that describes the key elements of an effective product development and maintenance process. The Capability Maturity Model Integration covers best-practices for planning, engineering and managing product development and maintenance.

capture/playback

Synonyms: capture/replay, record/playback

A test automation approach, where inputs to the test object are recorded during manual testing in order to generate automated test scripts that could be executed later (i.e. replayed).

capture/playback tool

Synonyms: capture/replay tool, record/playback tool

A type of test execution tool where inputs are recorded during manual testing in order to generate automated test scripts that can be executed later (i.e. replayed). These tools are often used to support automated regression testing.

CASE

Acronym for Computer Aided Software Engineering.

CAST

See Also: test automation

Acronym for Computer Aided Software Testing.

causal analysis

Ref: CMMI

The analysis of defects to determine their root cause.
cause-effect diagram

Ref: After Juran

Synonyms: fishbone diagram, Ishikawa diagram

A graphical representation used to organize and display the interrelationships of various possible root causes of a problem. Possible causes of a real or potential defect or failure are organized in categories and subcategories in a horizontal tree-structure, with the (potential) defect or failure as the root node.

cause-effect graph

A graphical representation of inputs and/or stimuli (causes) with their associated outputs (effects), which can be used to design test cases.

cause-effect graphing

Ref: BS 7925/2

Synonyms: cause-effect analysis

A black-box test design technique in which test cases are designed from cause-effect graphs.

certification

The process of confirming that a component, system or person complies with its specified requirements, e.g., by passing an exam.

change management

See Also: configuration management

(1) A structured approach to transitioning individuals and organizations from a current state to a desired future state. (2) Controlled way to effect a change, or a proposed change, to a product or service.

changeability

Ref: ISO 9126  See Also: maintainability

The capability of the software product to enable specified modifications to be implemented.

checklist-based reviewing

Ref: ISO 20246

A review technique guided by a list of questions or required attributes.

checklist-based testing

An experience-based test technique whereby the experienced tester uses a high-level list of items to be noted, checked, or remembered, or a set of rules or criteria against which a product has to be verified.

classification tree

See Also: classification tree method

A tree showing equivalence partitions hierarchically ordered, which is used to design test cases in the classification tree method.

classification tree method

Ref: Grochtmann  See Also: combinatorial testing

A black-box test design technique in which test cases, described by means of a classification tree, are designed to execute combinations of representatives of input and/or output domains.
CLI
Acronym for Command-Line Interface.

**CLI testing**
Testing performed by submitting commands to the software under test using a dedicated command-line interface.

**co-existence**
Ref: After ISO 25010
The degree to which a component or system can perform its required functions while sharing an environment and resources with other components or systems without a negative impact on any of them.

**code coverage**
An analysis method that determines which parts of the software have been executed (covered) by the test suite and which parts have not been executed, e.g., statement coverage, decision coverage or condition coverage.

**codependent behavior**
Excessive emotional or psychological dependence on another person, specifically in trying to change that person's current (undesirable) behavior while supporting them in continuing that behavior. For example, in software testing, complaining about late delivery to test and yet enjoying the necessary "heroism", working additional hours to make up time when delivery is running late, therefore reinforcing the lateness.

**collapsed decision table**
A decision table in which combinations of inputs that are impossible or lead to the same outputs are merged into one column (rule), by setting the conditions that do not influence the outputs to don't care.

**combinatorial testing**
See Also: classification tree method, n-wise testing, pairwise testing, orthogonal array testing
A black-box test design technique in which test cases are designed to execute specific combinations of values of several parameters.

**commercial off-the-shelf (COTS)**
Synonyms: off-the-shelf software
A software product that is developed for the general market, i.e. for a large number of customers, and that is delivered to many customers in identical format.

**compatibility**
The degree to which a component or system can exchange information with other components or systems.

**compiler**
Ref: ISO 24765
A computer program that translates programs expressed in a high-order language into their machine language equivalents.

**complexity**
See Also: cyclomatic complexity
The degree to which a component or system has a design and/or internal structure that is difficult to understand, maintain and verify.
compliance

Ref: IEEE 730

The capability of the software product to adhere to standards, conventions or regulations in laws and similar prescriptions.

component

Synonyms: module, unit

A minimal part of a system that can be tested in isolation.

component integration testing

Synonyms: link testing

Testing performed to expose defects in the interfaces and interactions between integrated components.

component specification

A description of a component's function in terms of its output values for specified input values under specified conditions, and required non-functional behavior (e.g., resource-utilization).

component testing

Ref: ISO 24765

Synonyms: module testing, unit testing

The testing of individual hardware or software components.

compound condition

Synonyms: multiple condition

Two or more single conditions joined by means of a logical operator (AND, OR or XOR), e.g., A>B AND C>1000.

computer forensics

The practice of determining how a security attack has succeeded and assessing the damage caused.

condition

See Also: condition testing

Synonyms: branch condition

A logical expression that can be evaluated as True or False, e.g., A>B.

condition coverage

Synonyms: branch condition coverage

The percentage of condition outcomes that have been exercised by a test suite. 100% condition coverage requires each single condition in every decision statement to be tested as True and False.

condition outcome

The evaluation of a condition to True or False.
condition testing

A white-box test design technique in which test cases are designed to execute condition outcomes.

confidence interval

In managing project risks, the period of time within which a contingency action must be implemented in order to be effective in reducing the impact of the risk.

configuration

The composition of a component or system as defined by the number, nature, and interconnections of its constituent parts.

configuration item

Ref: ISO 24765

An aggregation of work products that is designated for configuration management and treated as a single entity in the configuration management process.

configuration management

Ref: ISO 24765

A discipline applying technical and administrative direction and surveillance to identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, record and report change processing and implementation status, and verify compliance with specified requirements.

configuration management tool

A tool that provides support for the identification and control of configuration items, their status over changes and versions, and the release of baselines consisting of configuration items.

confirmation testing

Synonyms: re-testing

Dynamic testing conducted after fixing defects with the objective to confirm that failures caused by those defects do not occur anymore.

consultative test strategy

A test strategy whereby the test team relies on the input of one or more key stakeholders to determine the details of the strategy.

consultative testing

Testing driven by the advice and guidance of appropriate experts from outside the test team (e.g., technology experts and/or business domain experts).

content-based model

Synonyms: content reference model

A process model providing a detailed description of good engineering practices, e.g., test practices.

context of use

Ref: ISO 9241-11

Users, tasks, equipment (hardware, software and materials), and the physical and social environments in which a software product is used.
continuous representation

Ref: CMMI

A capability maturity model structure wherein capability levels provide a recommended order for approaching process improvement within specified process areas.

contractual acceptance testing

Acceptance testing conducted to verify whether a system satisfies its contractual requirements.

control chart

Synonyms: Shewhart chart

A statistical process control tool used to monitor a process and determine whether it is statistically controlled. It graphically depicts the average value and the upper and lower control limits (the highest and lowest values) of a process.

control flow

Ref: ISO 29119

The sequence in which operations are performed during the execution of a test item.

control flow analysis

A form of static analysis based on a control flow graph.

Control flow graph

An abstract representation of all possible control flows through a component or system.

control flow testing

See Also: path testing, branch testing, condition testing, decision testing, statement testing

A test technique in which test cases are designed on the basis of control flows.

convergence metric

A metric that shows progress toward a defined criterion, e.g., convergence of the total number of tests executed to the total number of tests planned for execution.

conversion testing

Synonyms: migration testing

Testing of software used to convert data from existing systems for use in replacement systems.

corporate dashboard

See Also: balanced scorecard, dashboard

A dashboard-style representation of the status of corporate performance data.

cost of quality

The total costs incurred on quality activities and issues and often split into prevention costs, appraisal costs, internal failure costs and external failure costs.
coverage

Ref: After ISO 29119

Synonyms: test coverage

The degree to which specified coverage items have been determined or have been exercised by a test suite expressed as a percentage.

coverage analysis

Measurement of achieved coverage to a specified coverage item during test execution referring to predetermined criteria to determine whether additional testing is required and if so, which test cases are needed.

coverage item

Ref: ISO 29119

An attribute or combination of attributes that is derived from one or more test conditions by using a test technique that enables the measurement of the thoroughness of the test execution.

coverage tool

Synonyms: coverage measurement tool

A tool that provides objective measures of what structural elements, e.g., statements, branches have been exercised by a test suite.

critical success factor

An element necessary for an organization or project to achieve its mission. Critical success factors are the critical factors or activities required for ensuring the success.

Critical Testing Processes (CTP)

See Also: content-based model

A content-based model for test process improvement built around twelve critical processes. These include highly visible processes, by which peers and management judge competence and mission-critical processes in which performance affects the company’s profits and reputation.

cross-site scripting (XSS)

Ref: NIST.IR.7298

A vulnerability that allows attackers to inject malicious code into an otherwise benign website.

custom software

Synonyms: bespoke software

Software developed specifically for a set of users or customers. The opposite is commercial off-the-shelf software.

custom tool

A software tool developed specifically for a set of users or customers.

cyclomatic complexity

Ref: After McCabe

Synonyms: cyclomatic number

The maximum number of linear, independent paths through a program. Cyclomatic complexity may be computed as $L - N + 2P$, where $L =$ the number of edges/links in a graph, $N =$ the number of nodes in a graph, $P =$ the number of disconnected parts of the graph (e.g., a called graph or subroutine).
daily build
A development activity whereby a complete system is compiled and linked every day (often overnight), so that a consistent system is available at any time including all latest changes.

dashboard
See Also: corporate dashboard, scorecard
A representation of dynamic measurements of operational performance for some organization or activity, using metrics represented via metaphors such as visual dials, counters, and other devices resembling those on the dashboard of an automobile, so that the effects of events or activities can be easily understood and related to operational goals.

data definition
An executable statement where a variable is assigned a value.

data flow
Ref: Beiser
An abstract representation of the sequence and possible changes of the state of data objects, where the state of an object is any of creation, usage, or destruction.

data flow analysis
A form of static analysis based on the definition and usage of variables.

data flow coverage
The percentage of definition-use pairs that have been exercised by a test suite.

data flow testing
A white-box test design technique in which test cases are designed to execute definition-use pairs of variables.

data obfuscation
Data transformation that makes it difficult for a human to recognize the original data.

data privacy
The protection of personally identifiable information or otherwise sensitive information from undesired disclosure.

data-driven testing
Ref: Fewster and Graham  See Also: keyword-driven testing
A scripting technique that stores test input and expected results in a table or spreadsheet, so that a single control script can execute all of the tests in the table. Data-driven testing is often used to support the application of test execution tools such as capture/playback tools.

database integrity testing
Testing the methods and processes used to access and manage the database, to ensure access methods, processes and data rules function as expected and that during access to the database, data is not corrupted or unexpectedly deleted, updated or created.
dd-path

See Also: path

A path between two decisions of an algorithm, or two decision nodes of a corresponding graph, that includes no other decisions.

debugging

The process of finding, analyzing and removing the causes of failures in software.

debugging tool

Synonyms: debugger

A tool used by programmers to reproduce failures, investigate the state of programs and find the corresponding defect. Debuggers enable programmers to execute programs step by step, to halt a program at any program statement and to set and examine program variables.

decision

Ref: ISO 29119

A type of statement in which a choice between two or more possible outcomes controls which set of actions will result.

decision condition coverage

The percentage of all condition outcomes and decision outcomes that have been exercised by a test suite. 100% decision condition coverage implies both 100% condition coverage and 100% decision coverage.

decision condition testing

A white-box test design technique in which test cases are designed to execute condition outcomes and decision outcomes.

decision coverage

The coverage of decision outcomes.

decision outcome

The result of a decision that determines the next statement to be executed.

decision table

Ref: ISO 24765

Synonyms: cause-effect decision table

A table used to show sets of conditions and the actions resulting from them.

decision table testing

Ref: Egler63  See Also: decision table

A black-box test technique in which test cases are designed to execute the combinations of inputs and/or stimuli (causes) shown in a decision table.

decision testing

A white-box test technique in which test cases are designed to execute decision outcomes.
defect
Ref: After IEEE 1044
Synonyms: bug , fault
An imperfection or deficiency in a work product where it does not meet its requirements or specifications.

defect density
Ref: After ISO 24765
Synonyms: fault density
The number of defects per unit size of a work product.

defect detection percentage (DDP)
See Also: escaped defect
Synonyms: Fault Detection Percentage (FDP)
The number of defects found by a test level, divided by the number found by that test level and any other means afterwards.

defect management
See Also: incident management
The process of recognizing and recording defects, classifying them, investigating them, taking action to resolve them, and disposing of them when resolved.

defect management committee
Synonyms: defect triage committee
A cross-functional team of stakeholders who manage reported defects from initial detection to ultimate resolution (defect removal, defect deferral, or report cancellation). In some cases, the same team as the configuration control board.

defect management tool
See Also: incident management tool
Synonyms: bug tracking tool , defect tracking tool
A tool that facilitates the recording and status tracking of defects.

defect masking
Ref: After IEEE 610
Synonyms: fault masking
An occurrence in which one defect prevents the detection of another.

defect report
See Also: incident report
Synonyms: bug report
Documentation of the occurrence, nature, and status of a defect.

defect taxonomy
Synonyms: bug taxonomy
A system of (hierarchical) categories designed to be a useful aid for reproducibly classifying defects.
defect-based test design technique

See Also: defect taxonomy

Synonyms: defect-based technique

A procedure to derive and/or select test cases targeted at one or more defect types, with tests being developed from what is known about the specific defect type.

definition-use pair

The association of a definition of a variable with the subsequent use of that variable. Variable uses include computational (e.g., multiplication) or to direct the execution of a path (predicate use).

demilitarized zone (DMZ)

See Also: network zone

A physical or logical subnetwork that contains and exposes an organization's external-facing services to an untrusted network, commonly the Internet.

Deming cycle

Ref: After Deming

An iterative four-step problem-solving process (plan-do-check-act) typically used in process improvement.

denial of service (DOS)

A security attack that is intended to overload the system with requests such that legitimate requests cannot be serviced.

design-based testing

An approach to testing in which test cases are designed based on the architecture and/or detailed design of a component or system (e.g., tests of interfaces between components or systems).

desk checking

See Also: static testing

Testing of software or a specification by manual simulation of its execution.

diagnosing (IDEAL)

See Also: IDEAL

The phase within the IDEAL model where it is determined where one is, relative to where one wants to be. The diagnosing phase consists of the activities to characterize current and desired states and develop recommendations.

discount usability testing

A test strategy for usability testing that puts emphasis on keeping costs down without compromising too much on the quality of the usability evaluation.

domain analysis

See Also: boundary value analysis, equivalence partitioning

A black-box test design technique that is used to identify efficient and effective test cases when multiple variables can or should be tested together. It builds on and generalizes equivalence partitioning and boundary values analysis.
**driver**

Ref: After TMap

Synonyms: test driver

A software component or test tool that replaces a component that takes care of the control and/or the calling of a component or system.

---

**dynamic analysis**

Ref: After IEEE 610

The process of evaluating behavior, e.g., memory performance, CPU usage, of a system or component during execution.

---

**dynamic analysis tool**

A tool that provides run-time information on the state of the software code. These tools are most commonly used to identify unassigned pointers, check pointer arithmetic and to monitor the allocation, use and de-allocation of memory and to flag memory leaks.

---

**dynamic comparison**

Comparison of actual and expected results, performed while the software is being executed, for example by a test execution tool.

---

**dynamic testing**

Testing that involves the execution of the software of a component or system.

---

**effectiveness**

Ref: ISO 9241  See Also: efficiency

Extent to which correct and complete goals are achieved.

---

**efficiency**

Ref: ISO 9241  See Also: effectiveness

Resources expended in relation to the extent with which users achieve specified goals.

---

**efficiency testing**

Testing to determine the efficiency of a software product.

---

**elementary comparison testing**

Ref: TMap

A black-box test design technique in which test cases are designed to execute combinations of inputs using the concept of modified condition / decision coverage.

---

**embedded iterative model**

A development lifecycle sub-model that applies an iterative approach to detailed design, coding and testing within an overall sequential model. In this case, the high-level design documents are prepared and approved for the entire project but the actual detailed design, code development and testing are conducted in iterations.

---

**emotional intelligence**

The ability, capacity, and skill to identify, assess, and manage the emotions of one's self, of others, and of groups.
emulator
Ref: IEEE 610  See Also: simulator
A device, computer program, or system that accepts the same inputs and produces the same outputs as a given system.

encryption
The process of encoding information so that only authorized parties can retrieve the original information, usually by means of a specific decryption key or process.

entry criteria
Ref: Gilb and Graham
Synonyms: definition of ready
The set of conditions for officially starting a defined task.

entry point
An executable statement or process step which defines a point at which a given process is intended to begin.

equivalence partition
Synonyms: equivalence class
A portion of the value domain of a data element related to the test object for which all values are expected to be treated the same based on the specification.

equivalence partition coverage
The percentage of equivalence partitions that have been exercised by a test suite.

equivalence partitioning
Ref: After ISO 29119
Synonyms: partition testing
A black-box test technique in which test cases are designed to exercise equivalence partitions by using one representative member of each partition.

equivalent manual test effort (EMTE)
Effort required for running tests manually.

error
Ref: ISO 24765
Synonyms: mistake
A human action that produces an incorrect result.

error guessing
Ref: ISO 29119
A test technique in which tests are derived on the basis of the tester's knowledge of past failures, or general knowledge of failure modes.

error tolerance
Ref: After IEEE 610
The ability of a system or component to continue normal operation despite the presence of erroneous inputs.
escaped defect

See Also: defect detection percentage

A defect that was not detected in a previous test level which is supposed to find such type of defects.

establishing (IDEAL)

See Also: IDEAL

The phase within the IDEAL model where the specifics of how an organization will reach its destination are planned. The establishing phase consists of the activities set priorities, develop approach and plan actions.

ethical hacker

A security tester using hacker techniques.

European Foundation for Quality Management excellence model (EFQM)

A non-prescriptive framework for an organization's quality management system, defined and owned by the European Foundation for Quality Management, based on five 'Enabling' criteria (covering what an organization does), and four 'Results' criteria (covering what an organization achieves).

executable statement

A statement which, when compiled, is translated into object code, and which will be executed procedurally when the program is running and may perform an action on data.

exercised

A program element is said to be exercised by a test case when the input value causes the execution of that element, such as a statement, decision, or other structural element.

exhaustive testing

Synonyms: complete testing

A test approach in which the test suite comprises all combinations of input values and preconditions.

exit criteria

Ref: After Gilb and Graham

Synonyms: completion criteria , test completion criteria , definition of done

The set of conditions for officially completing a defined task.

exit point

An executable statement or process step which defines a point at which a given process is intended to cease.

expected result

Ref: After ISO 29119

Synonyms: expected outcome , predicted outcome

The predicted observable behavior of a component or system executing under specified conditions, based on its specification or another source.

experience-based test technique

Synonyms: experience-based technique

A procedure to derive and/or select test cases based on the tester's experience, knowledge and intuition.
experience-based testing
Testing based on the tester’s experience, knowledge and intuition.

expert usability review
See Also: informal review
An informal usability review in which the reviewers are experts. Experts can be usability experts or subject matter experts, or both.

exploratory testing
Ref: After ISO 29119
An approach to testing whereby the testers dynamically design and execute tests based on their knowledge, exploration of the test item and the results of previous tests.

Extreme Programming (XP)
See Also: Agile software development
A software engineering methodology used within Agile software development whereby core practices are programming in pairs, doing extensive code review, unit testing of all code, and simplicity and clarity in code.

facilitator
Ref: After IEEE 1028  See Also: moderator
The leader and main person responsible for an inspection or review process.

fail
A test is deemed to fail if its actual result does not match its expected result.

failover testing
See Also: recoverability testing
Testing by simulating failure modes or actually causing failures in a controlled environment. Following a failure, the failover mechanism is tested to ensure that data is not lost or corrupted and that any agreed service levels are maintained (e.g., function availability or response times).

failure
Ref: After ISO 24765
An event in which a component or system does not perform a required function within specified limits.

failure mode
Ref: IEEE 610
The physical or functional manifestation of a failure. For example, a system in failure mode may be characterized by slow operation, incorrect outputs, or complete termination of execution.

Failure Mode and Effect Analysis (FMEA)
See Also: Failure Mode, Effect and Criticality Analysis
Synonyms: Software Failure Mode and Effect Analysis
A systematic approach to risk identification and analysis of identifying possible modes of failure and attempting to prevent their occurrence.
Failure Mode, Effects, and Criticality Analysis (FMECA)

See Also: Failure Mode and Effect Analysis

Synonyms: software failure mode

An extension of FMEA, as in addition to the basic FMEA, it includes a criticality analysis, which is used to chart the probability of failure modes against the severity of their consequences. The result highlights failure modes with relatively high probability and severity of consequences, allowing remedial effort to be directed where it will produce the greatest value.

failure rate

Ref: ISO 24765

The ratio of the number of failures of a given category to a given unit of measure.

false-negative result

Synonyms: false-pass result

A test result which fails to identify the presence of a defect that is actually present in the test object.

false-positive result

Synonyms: false-fail result

A test result in which a defect is reported although no such defect actually exists in the test object.

fault attack

See Also: negative testing, security attack

Synonyms: attack

Directed and focused attempt to evaluate a specific quality characteristic of a test object by attempting to force specific failures to occur. Usually focused on reliability or security.

fault injection

See Also: fault tolerance

The process of intentionally adding defects to a system for the purpose of finding out whether the system can detect, and possibly recover from, a defect. Fault injection is intended to mimic failures that might occur in the field.

fault seeding

Ref: After IEEE 610

Synonyms: bebugging, error seeding

The process of intentionally adding defects to those already in the component or system for the purpose of monitoring the rate of detection and removal, and estimating the number of remaining defects. Fault seeding is typically part of development (pre-release) testing and can be performed at any test level (component, integration, or system).

fault seeding tool

Synonyms: error seeding tool

A tool for seeding (i.e., intentionally inserting) faults in a component or system.

fault tolerance

Ref: ISO 9126  See Also: reliability, robustness

The capability of the software product to maintain a specified level of performance in cases of software faults (defects) or of infringement of its specified interface.
Fault Tree Analysis (FTA)

Synonyms: Software Fault Tree Analysis

A technique used to analyze the causes of faults (defects). The technique visually models how logical relationships between failures, human errors, and external events can combine to cause specific faults to disclose.

feasible path

A path for which a set of input values and preconditions exists which causes it to be executed.

feature

Ref: After IEEE 1008

Synonyms: software feature

An attribute of a component or system specified or implied by requirements documentation (for example reliability, usability or design constraints).

feature-driven development

See Also: Agile software development

An iterative and incremental software development process driven from a client-valued functionality (feature) perspective. Feature-driven development is mostly used in Agile software development.

finding

A result of an evaluation that identifies some important issue, problem, or opportunity.

finite state machine

Ref: IEEE 610

A computational model consisting of a finite number of states and transitions between those states, possibly with accompanying actions.

firewall

A component or set of components that controls incoming and outgoing network traffic based on predetermined security rules.

formal review

Ref: ISO 20246

A form of review that follows a defined process with a formally documented output.

formative evaluation

See Also: summative evaluation

A type of evaluation designed and used to improve the quality of a component or system, especially when it is still being designed.

frozen test basis

See Also: baseline

A test basis document that can only be amended by a formal change control process.

Function Point Analysis (FPA)

Method aiming to measure the size of the functionality of an information system. The measurement is independent of the technology. This measurement may be used as a basis for the measurement of productivity, the estimation of the needed resources, and project control.
**functional integration**

*See Also:* integration testing

An integration approach that combines the components or systems for the purpose of getting a basic functionality working early.

---

**functional requirement**

*Ref:* ISO 24765

A requirement that specifies a function that a component or system must be able to perform.

---

**functional suitability**

*Ref:* After ISO 25010

*Synonym:* functionality

The degree to which a component or system provides functions that meet stated and implied needs when used under specified conditions.

---

**functional test design technique**

*See Also:* black-box test design technique

Procedure to derive and/or select test cases based on an analysis of the specification of the functionality of a component or system without reference to its internal structure.

---

**functional testing**

*Ref:* ISO 24765  *See Also:* black-box testing

Testing conducted to evaluate the compliance of a component or system with functional requirements.

---

**functionality testing**

The process of testing to determine the functionality of a software product.

---

**fuzz testing**

*Synonyms:* fuzzing

A software testing technique used to discover security vulnerabilities by inputting massive amounts of random data, called fuzz, to the component or system.

---

**generic test automation architecture**

Representation of the layers, components, and interfaces of a test automation architecture, allowing for a structured and modular approach to implement test automation.

---

**Goal Question Metric (GQM)**

An approach to software measurement using a three-level model conceptual level (goal), operational level (question) and quantitative level (metric).

---

**GUI**

Acronym for Graphical User Interface.

---

**GUI testing**

Testing performed by interacting with the software under test via the graphical user interface.
hacker
See Also: attacker
A person or organization who is actively involved in security attacks, usually with malicious intent.

hardware-software integration testing
See Also: integration testing
Testing performed to expose defects in the interfaces and interaction between hardware and software components.

hashing
Transformation of a variable length string of characters into a usually shorter fixed-length value or key. Hashed values, or hashes, are commonly used in table or database lookups. Cryptographic hash functions are used to secure data.

hazard analysis
See Also: risk analysis
A technique used to characterize the elements of risk. The result of a hazard analysis will drive the methods used for development and testing of a system.

heuristic
A generally recognized rule of thumb that helps to achieve a goal.

heuristic evaluation
A usability review technique that targets usability problems in the user interface or user interface design. With this technique, the reviewers examine the interface and judge its compliance with recognized usability principles (the "heuristics").

high-level test case
See Also: low-level test case
Synonyms: abstract test case, logical test case
A test case without concrete values for input data and expected results.

horizontal traceability
The tracing of requirements for a test level through the layers of test documentation (e.g., test plan, test design specification, test case specification and test procedure specification or test script).

human-centered design
Ref: ISO 9241-210
An approach to design that aims to make software products more usable by focusing on the use of the software products and applying human factors, ergonomics, and usability knowledge and techniques.

hyperlink
A pointer within a web page that leads to other web pages.

hyperlink test tool
A tool used to check that no broken hyperlinks are present on a web site.
IDEAL
An organizational improvement model that serves as a roadmap for initiating, planning, and implementing improvement actions. The IDEAL model is named for the five phases it describes: initiating, diagnosing, establishing, acting, and learning.

impact analysis
Ref: After ISO 24765
The identification of all work products affected by a change, including an estimate of the resources needed to accomplish the change.

incident
Synonyms: deviation, software test incident, test incident
An event occurring that requires investigation.

incident management
See Also: defect management
The process of recognizing and recording incidents, classifying them, investigating them, taking action to resolve them, and disposing of them when resolved.

incident management tool
See Also: defect management tool
A tool that facilitates the recording and status tracking of incidents.

incident report
Ref: ISO 29119
Synonyms: deviation report, software test incident report, test incident report
Documentation of the occurrence, nature, and status of an incident.

incremental development model
Ref: After PMBOK  See Also: iterative development model
A development lifecycle model in which the project scope is generally determined early in the project lifecycle, but time and cost estimates are routinely modified as the project team understanding of the product increases. The product is developed through a series of repeated cycles, each delivering an increment which successively adds to the functionality of the product.

incremental testing
Testing where components or systems are integrated and tested one or some at a time, until all the components or systems are integrated and tested.

independence of testing
Ref: After DO-178b
Separation of responsibilities, which encourages the accomplishment of objective testing.

indicator
Ref: ISO 25040
A measure that provides an estimate or evaluation of specified attributes derived from a model with respect to defined information needs.
infeasible path

A path that cannot be exercised by any set of possible input values.

informal group review

Ref: ISO 20246  See Also: informal review

An informal review performed by three or more persons.

informal review

Ref: ISO 20246

A type of review without a formal (documented) procedure.

information assurance

Ref: NIST.IR.7298

Measures that protect and defend information and information systems by ensuring their availability, integrity, authentication, confidentiality, and non-repudiation. These measures include providing for restoration of information systems by incorporating protection, detection, and reaction capabilities.

information security

Ref: NIST.IR.7298

Synonyms: cybersecurity

The protection of information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide confidentiality, integrity, and availability.

initiating (IDEAL)

See Also: IDEAL

The phase within the IDEAL model where the groundwork is laid for a successful improvement effort. The initiating phase consists of the activities: set context, build sponsorship and charter infrastructure.

input

Ref: ISO 24765

Data received by a component or system from an external source.

input value

See Also: input

An instance of an input.

insider threat

A security threat originating from within the organization, often by an authorized system user.

insourced testing

Testing performed by people who are co-located with the project team but are not fellow employees.
inspection

Ref: After ISO 20246

A type of formal review to identify issues in a work product, which provides measurement to improve the review process and the software development process.

installability

Ref: ISO 9126  
See Also: portability

The capability of the software product to be installed in a specified environment.

installability testing

See Also: portability testing

Testing the installability of a software product.

installation guide

Supplied instructions on any suitable media, which guides the installer through the installation process. This may be a manual guide, step-by-step procedure, installation wizard, or any other similar process description.

installation wizard

Supplied software on any suitable media, which leads the installer through the installation process. It normally runs the installation process, provides feedback on installation results, and prompts for options.

instrumentation

The insertion of additional code into the program in order to collect information about program behavior during execution, e.g., for measuring code coverage.

instrumenter

Synonyms: program instrumenter

A software tool used to carry out instrumentation.

intake test

See Also: smoke test

Synonyms: pretest

A special instance of a smoke test to decide if the component or system is ready for detailed and further testing. An intake test is typically carried out at the start of the test execution phase.

integration

The process of combining components or systems into larger assemblies.

integration testing

See Also: component integration testing, system integration testing

Testing performed to expose defects in the interfaces and in the interactions between integrated components or systems.

interface testing

An integration test type that is concerned with testing the interfaces between components or systems.
interoperability

**Ref:** After ISO 25010

The degree to which two or more components or systems can exchange information and use the information that has been exchanged.

**interoperability testing**

**See Also:** functionality testing

**Synonyms:** compatibility testing

Testing to determine the interoperability of a software product.

**intrusion detection system (IDS)**

**See Also:** malware scanning

A system which monitors activities on the 7 layers of the OSI model from network to application level, to detect violations of the security policy.

**invalid testing**

**See Also:** error tolerance, negative testing

Testing using input values that should be rejected by the component or system.

**isolation testing**

Testing of individual components in isolation from surrounding components, with surrounding components being simulated by stubs and drivers, if needed.

**iterative development model**

A development lifecycle where a project is broken into a usually large number of iterations. An iteration is a complete development loop resulting in a release (internal or external) of an executable product, a subset of the final product under development, which grows from iteration to iteration to become the final product.

**keyword-driven testing**

**See Also:** data-driven testing

**Synonyms:** action word-driven testing

A scripting technique that uses data files to contain not only test data and expected results, but also keywords related to the application being tested. The keywords are interpreted by special supporting scripts that are called by the control script for the test.

**lead assessor**

The person who leads an assessment. In some cases, for instance CMMI and TMMI when formal assessments are conducted, the lead assessor must be accredited and formally trained.

**learnability**

**Ref:** ISO 9126   **See Also:** usability

The capability of the software product to enable the user to learn its application.

**learning (IDEAL)**

**See Also:** IDEAL

The phase within the IDEAL model where one learns from experiences and improves one’s ability to adopt new processes and technologies in the future. The learning phase consists of the activities: analyze and validate, and propose future actions.
level of intrusion

The level to which a test object is modified by adjusting it for testability.

level test plan

See Also: test plan

A test plan that typically addresses one test level.

lifecycle model

Ref: CMMI  See Also: software lifecycle

A description of the processes, workflows, and activities used in the development, delivery, maintenance, and retirement of a system.

linear scripting

A simple scripting technique without any control structure in the test scripts.

load profile

See Also: operational profile

A specification of the activity which a component or system being tested may experience in production. A load profile consists of a designated number of virtual users who process a defined set of transactions in a specified time period and according to a predefined operational profile.

load testing

Ref: After ISO 29119  See Also: performance testing, stress testing

A type of performance testing conducted to evaluate the behavior of a component or system under varying loads, usually between anticipated conditions of low, typical, and peak usage.

low-level test case

See Also: high-level test case

Synonyms: concrete test case

A test case with concrete values for input data and expected results.

maintainability

Ref: After ISO 25010

The degree to which a component or system can be modified by the intended maintainers.

maintainability testing

Synonyms: serviceability testing

Testing to determine the maintainability of a software product.

maintenance

Ref: After ISO 14764

The process of modifying a component or system after delivery to correct defects, improve quality attributes, or adapt to a changed environment.
maintenance testing
Testing the changes to an operational system or the impact of a changed environment to an operational system.

malware
Software that is intended to harm a system or its components.

malware scanning
See Also: intrusion detection system
Static analysis aiming to detect and remove malicious code received at an interface.

man-in-the-middle attack
The interception, mimicking and/or altering and subsequent relaying of communications (e.g., credit card transactions) by a third party such that a user remains unaware of the third party's presence.

management review
Ref: After IEEE 610, IEEE 1028
A systematic evaluation of software acquisition, supply, development, operation, or maintenance process, performed by or on behalf of management that monitors progress, determines the status of plans and schedules, confirms requirements and their system allocation, or evaluates the effectiveness of management approaches to achieve fitness for purpose.

manufacturing-based quality
Ref: After Garvin  See Also: product-based quality, transcendent-based quality, user-based quality, value-based quality
A view of quality, whereby quality is measured by the degree to which a product or service conforms to its intended design and requirements. Quality arises from the process(es) used.

master test plan
See Also: test plan
A test plan that is used to coordinate multiple test levels or test types.

maturity
Ref: ISO 25010
(1) The capability of an organization with respect to the effectiveness and efficiency of its processes and work practices. (2) The degree to which a component or system meets needs for reliability under normal operation.

maturity level
Ref: TMMI
Degree of process improvement across a predefined set of process areas in which all goals in the set are attained.

maturity model
A structured collection of elements that describe certain aspects of maturity in an organization, and aid in the definition and understanding of an organization's processes. A maturity model often provides a common language, shared vision and framework for prioritizing improvement actions.

MBT model
Any model used in model-based testing.
mean time between failures (MTBF)

See Also: reliability growth model

The arithmetic mean (average) time between failures of a system. The MTBF is typically part of a reliability growth model that assumes the failed system is immediately repaired, as a part of a defect fixing process.

mean time to repair (MTTR)

The arithmetic mean (average) time a system will take to recover from any failure. This typically includes testing to insure that the defect has been resolved.

measure

Ref: After ISO 25040

The number or category assigned to an attribute of an entity by making a measurement.

measurement

Ref: After ISO 25040

The process of assigning a number or category to an entity to describe an attribute of that entity.

measurement scale

Ref: ISO 14598

A scale that constrains the type of data analysis that can be performed on it.

memory leak

A memory access failure due to a defect in a program's dynamic store allocation logic that causes it to fail to release memory after it has finished using it, eventually causing the program and/or other concurrent processes to fail due to lack of memory.

methodical test strategy

A test strategy whereby the test team uses a pre-determined set of test conditions such as a quality standard, a checklist, or a collection of generalized, logical test conditions which may relate to a particular domain, application or type of testing.

methodical testing

Testing based on a standard set of tests, e.g., a checklist, a quality standard, or a set of generalized test cases.

metric

A measurement scale and the method used for measurement.

milestone

A point in time in a project at which defined (intermediate) deliverables and results should be ready.

mind map

A diagram used to represent words, ideas, tasks, or other items linked to and arranged around a central keyword or idea. Mind maps are used to generate, visualize, structure and classify ideas, and as an aid in study, organization, problem solving, decision making, and writing.
model coverage

The coverage of model elements.

model-based test strategy

A test strategy whereby the test team derives testware from models.

model-based testing (MBT)

Testing based on or involving models.

modeling tool

Ref: Graham

A tool that supports the creation, amendment and verification of models of the software or system.

moderator

See Also: facilitator
Synonyms: inspection leader

A neutral person who conducts a usability test session.

modified condition / decision coverage (MC/DC)

Synonyms: condition determination coverage , modified multiple condition coverage

The percentage of all single condition outcomes that independently affect a decision outcome that have been exercised by a test case suite. 100% modified condition / decision coverage implies 100% decision condition coverage.

modified condition / decision testing

Synonyms: condition determination testing , modified multiple condition testing

A white-box test design technique in which test cases are designed to execute single condition outcomes that independently affect a decision outcome.

monitoring tool

Ref: ISO 24765  See Also: dynamic analysis tool

A software tool or hardware device that runs concurrently with the component or system under test and supervises, records and/or analyzes the behavior of the component or system.

monkey testing

Testing by means of a random selection from a large range of inputs and by randomly pushing buttons, ignorant of how the product is being used.

multiple condition coverage

Synonyms: branch condition combination coverage , condition combination coverage

The percentage of combinations of all single condition outcomes within one statement that have been exercised by a test suite. 100% multiple condition coverage implies 100% modified condition / decision coverage.

multiple condition testing

Synonyms: branch condition combination testing , condition combination testing

A white-box test design technique in which test cases are designed to execute combinations of single condition outcomes (within one statement).
**mutation analysis**

A method to determine test suite thoroughness by measuring the extent to which a test suite can discriminate the program from slight variants (mutants) of the program.

**mutation testing**

*Synonyms:* back-to-back testing

Testing in which two or more variants of a component or system are executed with the same inputs, the outputs compared, and analyzed in cases of discrepancies.

**Myers-Briggs Type Indicator (MBTI)**

An indicator of psychological preference representing the different personalities and communication styles of people.

**N-switch coverage**

*Ref:* Chow

*Synonyms:* Chow's coverage metrics

The percentage of sequences of N+1 transitions that have been exercised by a test suite.

**N-switch testing**

*Ref:* Chow *See Also:* state transition testing

A form of state transition testing in which test cases are designed to execute all valid sequences of N+1 transitions.

**n-wise testing**

*See Also:* combinatorial testing, orthogonal array testing, pairwise testing

A black-box test design technique in which test cases are designed to execute all possible discrete combinations of any set of n input parameters.

**negative testing**

*Ref:* After Beizer.

*Synonyms:* dirty testing

Tests aimed at showing that a component or system does not work. Negative testing is related to the tester's attitude rather than a specific test approach or test design technique, e.g., testing with invalid input values or exceptions.

**neighborhood integration testing**

A form of integration testing where all of the nodes that connect to a given node are the basis for the integration testing.

**network zone**

A sub-network with a defined level of trust. For example, the Internet or a public zone would be considered to be untrusted.

**non-conformity**

*Ref:* ISO 9000

Non-fulfillment of a specified requirement.
non-functional requirement

Ref: After ISO 24765

A requirement that describes how the component or system will do what it is intended to do.

non-functional test design technique

See Also: black-box test design technique

Procedure to derive and/or select test cases for non-functional testing based on an analysis of the specification of a component or system without reference to its internal structure.

non-functional testing

Testing conducted to evaluate the compliance of a component or system with non-functional requirements.

offline MBT

Model-based test approach whereby test cases are generated into a repository for future execution.

online MBT

Synonyms: on-the-fly MBT

Model-based test approach whereby test cases are generated and executed simultaneously.

open source tool

A software tool that is available to all potential users in source code form, usually via the internet. Its users are permitted, usually under license, to study, change, improve and at times, to distribute the software.

operability

Ref: ISO 9126  See Also: usability

The capability of the software product to enable the user to operate and control it.

operational acceptance testing

See Also: operational testing

Synonyms: production acceptance testing

Operational testing in the acceptance test phase, typically performed in a (simulated) operational environment by operations and/or systems administration staff focusing on operational aspects, e.g., recoverability, resource-behavior, installability and technical compliance.

operational environment

Hardware and software products installed at users’ or customers’ sites where the component or system under test will be used. The software may include operating systems, database management systems, and other applications.

operational profile

An actual or predicted pattern of use of the component or system.

operational profile testing

Ref: Musa

Statistical testing using a model of system operations (short duration tasks) and their probability of typical use.
operational profiling

See Also: operational profile

The process of developing and implementing an operational profile.

operational testing

Ref: IEEE 610

Testing conducted to evaluate a component or system in its operational environment.

orthogonal array

A 2-dimensional array constructed with special mathematical properties, such that choosing any two columns in the array provides every pair combination of each number in the array.

orthogonal array testing

See Also: combinatorial testing, n-wise testing, pairwise testing

A systematic way of testing all-pair combinations of variables using orthogonal arrays. It significantly reduces the number of all combinations of variables to test all pair combinations.

output

Ref: After ISO 24765

Data transmitted by a component or system to an external destination.

output value

See Also: output

An instance of an output.

outsourced testing

Testing performed by people who are not co-located with the project team and are not fellow employees.

pair programming

Ref: extremeprogramming.org

An agile software development practice in which two programmers work together on one workstation.

pair testing

Two persons, e.g., two testers, a developer and a tester, or an end-user and a tester, working together to find defects. Typically, they share one computer and trade control of while testing.

pairwise integration testing

A form of integration testing that targets pairs of components that work together, as shown in a call graph.

pairwise testing

See Also: combinatorial testing, n-wise testing, orthogonal array testing

A black-box test design technique in which test cases are designed to execute all possible discrete combinations of each pair of input parameters.
Pareto analysis

A statistical technique in decision making that is used for selection of a limited number of factors that produce significant overall effect. In terms of quality improvement, a large majority of problems (80%) are produced by a few key causes (20%).

pass

A test is deemed to pass if its actual result matches its expected result.

pass/fail criteria

Ref: IEEE 829

Decision rules used to determine whether a test item (function) or feature has passed or failed a test.

password cracking

Ref: after NIST.IR.7298

A security attack recovering secret passwords stored in a computer system or transmitted over a network.

path

Synonyms: control flow path

A sequence of events, e.g., executable statements, of a component or system from an entry point to an exit point.

path coverage

The coverage of paths.

path sensitizing

Choosing a set of input values to force the execution of a given path.

path testing

A white-box test design technique in which test cases are designed to execute paths.

peer review

Ref: After ISO 20246

A form of review of work products performed by others qualified to do the same work.

penetration testing

A testing technique aiming to exploit security vulnerabilities (known or unknown) to gain unauthorized access.

performance efficiency

Ref: After ISO 25010

Synonyms: time behavior, performance

The degree to which a component or system uses time, resources and capacity when accomplishing its designated functions.
performance indicator

Ref: CMMI

Synonyms: key performance indicator

A high-level metric of effectiveness and/or efficiency used to guide and control progressive development, e.g., lead-time slip for software development.

performance profiling

The task of analyzing, e.g., identifying performance bottlenecks based on generated metrics, and tuning the performance of a software component or system using tools.

performance testing

See Also: efficiency testing

Testing to determine the performance of a software product.

performance testing tool

A test tool that generates load for a designated test item and that measures and records its performance during test execution.

perspective-based reading

Ref: After ISO 20246

Synonyms: perspective-based reviewing

A review technique whereby reviewers evaluate the work product from different viewpoints.

pharming

A security attack intended to redirect a web site's traffic to a fraudulent web site without the user's knowledge or consent.

phase containment

The percentage of defects that are removed in the same phase of the software lifecycle in which they were introduced.

phase test plan

See Also: test plan

A test plan that typically addresses one test phase.

phishing

An attempt to acquire personal or sensitive information by masquerading as a trustworthy entity in an electronic communication.

planning poker

See Also: Agile software development, Wideband Delphi

A consensus-based estimation technique, mostly used to estimate effort or relative size of user stories in Agile software development. It is a variation of the Wideband Delphi method using a deck of cards with values representing the units in which the team estimates.

pointer

Ref: IEEE 610

A data item that specifies the location of another data item. For example, a data item that specifies the address of the next employee record to be processed.
portability

Ref: ISO 9126

The ease with which the software product can be transferred from one hardware or software environment to another.

portability testing

Synonyms: configuration testing

Testing to determine the portability of a software product.

post-execution comparison

Comparison of actual and expected results, performed after the software has finished running.

postcondition

The expected state of a test item and its environment at the end of test case execution.

precondition

The required state of a test item and its environment prior to test case execution.

predicate

See Also: decision

A statement that can evaluate to true or false and may be used to determine the control flow of subsequent decision logic.

priority

The level of (business) importance assigned to an item, e.g., defect.

PRISMA

A systematic approach to risk-based testing that employs product risk identification and analysis to create a product risk matrix based on likelihood and impact. Term is derived from Product RISk MANagement.

probe effect

The effect on the component or system by the measurement instrument when the component or system is being measured, e.g., by a performance testing tool or monitor. For example performance may be slightly worse when performance testing tools are being used.

problem

Ref: ISO 24765

An unknown underlying cause of one or more incidents.

process

Ref: ISO 12207

A set of interrelated activities, which transform inputs into outputs.
process assessment

Ref: after ISO 15504

A disciplined evaluation of an organization's software processes against a reference model.

process cycle test

Ref: TMap  See Also: procedure testing

A black-box test design technique in which test cases are designed to execute business procedures and processes.

process improvement

Ref: CMMI

A program of activities designed to improve the performance and maturity of the organization's processes, and the result of such a program.

process model

A framework wherein processes of the same nature are classified into a overall model, e.g., a test improvement model.

process reference model

A process model providing a generic body of best practices and how to improve a process in a prescribed step-by-step manner.

process-compliant test strategy

A test strategy whereby the test team follows a set of predefined processes, whereby the processes address such items as documentation, the proper identification and use of the test basis and test oracle(s), and the organization of the test team.

process-compliant testing

See Also: standard-compliant testing

Testing that follows a set of defined processes, e.g., defined by an external party such as a standards committee.

process-driven scripting

A scripting technique where scripts are structured into scenarios which represent use cases of the software under test. The scripts can be parameterized with test data.

product risk

See Also: risk

A risk impacting the quality of a product.

product-based quality

See Also: manufacturing-based quality, quality characteristic, transcendent-based quality, user-based quality, value-based quality

A view of quality, wherein quality is based on a well-defined set of quality characteristics. These characteristics must be measured in an objective and quantititative way. Differences in the quality of products of the same type can be traced back to the way the specific quality characteristics have been implemented.

project

Ref: ISO 9000

A project is a unique set of coordinated and controlled activities with start and finish dates undertaken to achieve an objective conforming to specific requirements, including the constraints of time, cost and resources.
**project retrospective**

A structured way to capture lessons learned and to create specific action plans for improving on the next project or next project phase.

---

**project risk**

*See Also:* risk

A risk that impacts project success.

---

**pseudo-random**

A series which appears to be random but is in fact generated according to some prearranged sequence.

---

**qualification**

*Ref:* ISO 9000

The process of demonstrating the ability to fulfill specified requirements. Note the term "qualified" is used to designate the corresponding status.

---

**quality**

*Ref:* ISO 24765

The degree to which a component, system or process meets specified requirements and/or user/customer needs and expectations.

---

**quality assurance**

*Ref:* ISO 9000

Part of quality management focused on providing confidence that quality requirements will be fulfilled.

---

**quality characteristic**

*Ref:* ISO 24765

*Synonyms:* quality characteristic, software product characteristic, software quality characteristic, quality attribute

A category of product attributes that bears on quality.

---

**quality control**

*Ref:* after ISO 8402

The operational techniques and activities, part of quality management, that are focused on fulfilling quality requirements.

---

**quality function deployment (QFD)**

*Ref:* Akao

A method to transform user demands into design quality, to deploy the functions forming quality, and to deploy methods for achieving the design quality into subsystems and component parts, and ultimately to specific elements of the manufacturing process.

---

**quality gate**

A special milestone in a project. Quality gates are located between those phases of a project strongly depending on the outcome of a previous phase. A quality gate includes formal check of the documents of the previous phase.
quality management

Ref: ISO 9000

Coordinated activities to direct and control an organization with regard to quality. Direction and control with regard to quality generally includes the establishment of the quality policy and quality objectives, quality planning, quality control, quality assurance and quality improvement.

quality risk

See Also: quality characteristic, product risk

A product risk related to a quality characteristic.

RACI matrix

A matrix describing the participation by various roles in completing tasks or deliverables for a project or process. It is especially useful in clarifying roles and responsibilities. RACI is an acronym derived from the four key responsibilities most typically used: Responsible, Accountable, Consulted, and Informed.

random testing

A black-box test design technique where test cases are selected, possibly using a pseudo-random generation algorithm, to match an operational profile. This technique can be used for testing non-functional attributes such as reliability and performance.

Rational Unified Process (RUP)

A proprietary adaptable iterative software development process framework consisting of four project lifecycle phases: inception, elaboration, construction and transition.

reactive test strategy

A test strategy whereby the test team waits to design and implement tests until the software is received, reacting to the actual system under test.

reactive testing

Testing that dynamically responds to the system under test and test results being obtained. Typically reactive testing has a reduced planning cycle and the design and implementation test phases are not carried out until the test object is received.

reconnaissance

Synonyms: footprinting

The exploration of a target area aiming to gain information that can be useful for an attack.

recoverability

Ref: ISO 9126  See Also: reliability

The capability of the software product to re-establish a specified level of performance and recover the data directly affected in case of failure.

recoverability testing

See Also: reliability testing

Synonyms: recovery testing

Testing to determine the recoverability of a software product.

regression

A degradation in the quality of a component or system due to a change.
regression testing
Testing of a previously tested component or system following modification to ensure that defects have not been introduced or have been uncovered in unchanged areas of the software, as a result of the changes made.

regression-averse test strategy
A test strategy whereby the test team applies various techniques to manage the risk of regression such as functional and/or non-functional regression test automation at one or more levels.

regression-averse testing
Testing using various techniques to manage the risk of regression, e.g., by designing re-usable testware and by extensive automation of testing at one or more test levels.

regulatory acceptance testing
Acceptance testing conducted to verify whether a system conforms to relevant laws, policies and regulations.

release note
Ref: After IEEE 829
Synonyms: item transmittal report, test item transmittal report
A document identifying test items, their configuration, current status and other delivery information delivered by development to testing, and possibly other stakeholders, at the start of a test execution phase.

reliability
Ref: After ISO 25010
The degree to which a component or system performs specified functions under specified conditions for a specified period of time.

reliability growth model
A model that shows the growth in reliability over time during continuous testing of a component or system as a result of the removal of defects that result in reliability failures.

reliability testing
Testing to determine the reliability of a software product.

replaceability
Ref: ISO 9126 See Also: portability
The capability of the software product to be used in place of another specified software product for the same purpose in the same environment.

requirement
Ref: ISO 24765
A provision that contains criteria to be fulfilled.

requirements management tool
A tool that supports the recording of requirements, requirements attributes (e.g., priority, knowledge responsible) and annotation, and facilitates traceability through layers of requirements and requirements change management. Some requirements management tools also provide facilities for static analysis, such as consistency checking and violations to pre-defined requirements rules.
requirements phase

Ref: ISO 24765

The period of time in the software lifecycle during which the requirements for a software product are defined and documented.

requirements-based testing

An approach to testing in which test cases are designed based on test objectives and test conditions derived from requirements, e.g., tests that exercise specific functions or probe non-functional attributes such as reliability or usability.

resource utilization

Ref: After ISO 9126  See Also: efficiency

Synonyms: storage

The capability of the software product to use appropriate amounts and types of resources, for example the amounts of main and secondary memory used by the program and the sizes of required temporary or overflow files, when the software performs its function under stated conditions.

resource utilization testing

See Also: efficiency testing

Synonyms: storage testing

The process of testing to determine the resource-utilization of a software product.

result

See Also: actual result, expected result

Synonyms: outcome, test outcome, test result

The consequence/outcome of the execution of a test. It includes outputs to screens, changes to data, reports, and communication messages sent out.

resumption criteria

The criteria used to restart all or a portion of the testing activities that were suspended previously.

resumption requirements

The defined set of testing activities that must be repeated when testing is re-started after a suspension.

retrospective meeting

Synonyms: post-project meeting

A meeting at the end of a project during which the project team members evaluate the project and learn lessons that can be applied to the next project.

review

Ref: After IEEE 1028

A type of static testing during which a work product or process is evaluated by one or more individuals to detect issues and to provide improvements.

review plan

A document describing the approach, resources and schedule of intended review activities. It identifies, amongst others: documents and code to be reviewed, review types to be used, participants, as well as entry and exit criteria to be applied in case of formal reviews, and the rationale for their choice. It is a record of the review planning process.
review tool
A tool that provides support to the review process. Typical features include review planning and tracking support, communication support, collaborative reviews and a repository for collecting and reporting of metrics.

reviewer
Ref: After ISO 20246
Synonyms: checker, inspector
A participant in a review, who identifies issues in the work product.

risk
A factor that could result in future negative consequences.

risk analysis
The overall process of risk identification and risk assessment.

risk assessment
See Also: product risk, project risk, risk, risk impact, risk level, risk likelihood
The process to examine identified risks and determine the risk level.

risk identification
Ref: ISO 31000
The process of finding, recognizing and describing risks.

risk impact
Synonyms: impact
The damage that will be caused if the risk becomes an actual outcome or event.

risk level
Synonyms: risk exposure
The qualitative or quantitative measure of a risk defined by impact and likelihood.

risk likelihood
Synonyms: likelihood
The estimated probability that a risk will become an actual outcome or event.

risk management
Ref: ISO 31000
The coordinated activities to direct and control an organization with regard to risk.

risk mitigation
Synonyms: risk control
The process through which decisions are reached and protective measures are implemented for reducing or maintaining risks to specified levels.
risk type

Synonyms: risk category

A set of risks grouped by one or more common factors.

risk-based testing

Ref: After ISO 29119

Testing in which the management, selection, prioritization, and use of testing activities and resources are based on corresponding risk types and risk levels.

robustness

Ref: ISO 24765  See Also: error-tolerance, fault-tolerance

The degree to which a component or system can function correctly in the presence of invalid inputs or stressful environmental conditions.

robustness testing

Testing to determine the robustness of the software product.

role-based reviewing

Ref: After ISO 20246

A review technique where reviewers evaluate a work product from the perspective of different stakeholder roles.

root cause

Ref: CMMI

A source of a defect such that if it is removed, the occurrence of the defect type is decreased or removed.

root cause analysis

Synonyms: causal analysis

An analysis technique aimed at identifying the root causes of defects. By directing corrective measures at root causes, it is hoped that the likelihood of defect recurrence will be minimized.

S.M.A.R.T. goal methodology (SMART)

A methodology whereby objectives are defined very specifically rather than generically. SMART is an acronym derived from the attributes of the objective to be defined: Specific, Measurable, Attainable, Relevant and Timely.

safety

Ref: After ISO 24765

The capability that a system will not, under defined conditions, lead to a state in which human life, health, property, or the environment is endangered.

safety critical system

A system whose failure or malfunction may result in death or serious injury to people, or loss or severe damage to equipment, or environmental harm.

safety testing

Testing to determine the safety of a software product.
### salting

See Also: hashing

A cryptographic technique that adds random data (salt) to the user data prior to hashing.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>scalability</td>
<td>The capability of the software product to be upgraded to accommodate increased loads.</td>
</tr>
<tr>
<td>scalability testing</td>
<td>Testing to determine the scalability of the software product.</td>
</tr>
<tr>
<td>scenario-based reviewing</td>
<td>A review technique where the review is guided by determining the ability of the work product to address specific scenarios.</td>
</tr>
<tr>
<td>scorecard</td>
<td>A representation of summarized performance measurements representing progress towards the implementation of long-term goals. A scorecard provides static measurement of performance over or at the end of a defined interval.</td>
</tr>
<tr>
<td>scribe</td>
<td>A person who records information during the review meetings.</td>
</tr>
<tr>
<td>script kiddie</td>
<td>A person who executes security attacks that have been created by other hackers rather than creating one's own attacks.</td>
</tr>
<tr>
<td>scripted testing</td>
<td>Test execution carried out by following a previously documented sequence of tests.</td>
</tr>
<tr>
<td>scrum</td>
<td>An iterative incremental framework for managing projects commonly used with Agile software development.</td>
</tr>
<tr>
<td>security</td>
<td>The degree to which a component or system protects information and data so that persons or other components or systems have the degree of access appropriate to their types and levels of authorization.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>------</td>
<td>------------</td>
</tr>
<tr>
<td>security attack</td>
<td>An attempt to gain unauthorized access to a system or component, resources, information, or an attempt to compromise system integrity.</td>
</tr>
<tr>
<td>security audit</td>
<td>An audit evaluating an organization's security processes and infrastructure.</td>
</tr>
<tr>
<td>security policy</td>
<td>A high-level document describing the principles, approach and major objectives of the organization regarding security.</td>
</tr>
<tr>
<td>security procedure</td>
<td>A set of steps required to implement the security policy and the steps to be taken in response to a security incident.</td>
</tr>
<tr>
<td>security testing</td>
<td>Testing to determine the security of the software product.</td>
</tr>
<tr>
<td>security testing tool</td>
<td>A tool that provides support for testing security characteristics and vulnerabilities.</td>
</tr>
<tr>
<td>security tool</td>
<td>A tool that supports operational security.</td>
</tr>
<tr>
<td>security vulnerability</td>
<td>A weakness in the system that could allow for a successful security attack.</td>
</tr>
<tr>
<td>sequential development model</td>
<td>A type of development lifecycle model in which a complete system is developed in a linear way of several discrete and successive phases with no overlap between them.</td>
</tr>
<tr>
<td>session-based test management</td>
<td>A method for measuring and managing session-based testing, e.g., exploratory testing.</td>
</tr>
<tr>
<td>session-based testing</td>
<td>An approach to testing in which test activities are planned as uninterrupted sessions of test design and execution, often used in conjunction with exploratory testing.</td>
</tr>
<tr>
<td>severity</td>
<td>The degree of impact that a defect has on the development or operation of a component or system.</td>
</tr>
<tr>
<td>short-circuiting</td>
<td>A programming language/interpreter technique for evaluating compound conditions in which a condition on one side of a logical operator may not be evaluated if the condition on the other side is sufficient to determine the final outcome.</td>
</tr>
</tbody>
</table>
simulation

Ref: ISO 2382

The representation of selected behavioral characteristics of one physical or abstract system by another system.

simulator

Ref: ISO 24765  See Also: emulator

A device, computer program or system used during testing, which behaves or operates like a given system when provided with a set of controlled inputs.

smoke test

See Also: build, verification test, intake test

Synonyms: confidence test, sanity test

A subset of all defined/planned test cases that cover the main functionality of a component or system, to ascertain that the most crucial functions of a program work, but no bothering with finer details.

social engineering

Ref: NIST.IR.7298

An attempt to trick someone into revealing information (e.g., a password) that can be used to attack systems or networks.

software

Ref: ISO 24765

Computer programs, procedures, and possibly associated documentation and data pertaining to the operation of a computer system.

software development lifecycle

The activities performed at each stage in software development, and how they relate to one another logically and chronologically.

software integrity level

The degree to which software complies or must comply with a set of stakeholder-selected software and/or software-based system characteristics (e.g., software complexity, risk assessment, safety level, security level, desired performance, reliability or cost) which are defined to reflect the importance of the software to its stakeholders.

software lifecycle

The period of time that begins when a software product is conceived and ends when the software is no longer available for use. The software lifecycle typically includes a concept phase, requirements phase, design phase, implementation phase, test phase, installation and checkout phase, operation and maintenance phase, and sometimes, retirement phase. Note these phases may overlap or be performed iteratively.

software process improvement (SPI)

Ref: After CMMI

A program of activities designed to improve the performance and maturity of the organization’s software processes and the results of such a program.

software quality

Ref: After ISO 9126  See Also: quality

The totality of functionality and features of a software product that bear on its ability to satisfy stated or implied needs.
Software Usability Measurement Inventory (SUMI)  
Ref: Kirakowski93  
A questionnaire-based usability test technique for measuring software quality from the end user's point of view.

**specification**  
Ref: After IEEE 610  
A document that specifies, ideally in a complete, precise and verifiable manner, the requirements, design, behavior, or other characteristics of a component or system, and, often, the procedures for determining whether these provisions have been satisfied.

**specified input**  
An input for which the specification predicts a result.

**SQL injection**  
A security attack inserting malicious SQL statements into an entry field for execution.

**stability**  
Ref: ISO 25010  
The degree to which a component or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.

**staged representation**  
See Also: CMMI  
A model structure wherein attaining the goals of a set of process areas establishes a maturity level; each level builds a foundation for subsequent levels.

**standard**  
Ref: After CMMI  
Formal, possibly mandatory, set of requirements developed and used to prescribe consistent approaches to the way of working or to provide guidelines (e.g., ISO/IEC standards, IEEE standards, and organizational standards).

**standard-compliant test strategy**  
A test strategy whereby the test team follows a standard. Standards followed may be valid e.g., for a country (legislation standards), a business domain (domain standards), or internally (organizational standards).

**standard-compliant testing**  
See Also: process-compliant testing  
Testing that complies to a set of requirements defined by a standard, e.g., an industry testing standard or a standard for testing safety-critical systems.

**state diagram**  
Ref: After ISO 24765  
Synonym: state transition diagram  
A diagram that depicts the states that a component or system can assume, and shows the events or circumstances that cause and/or result from a change from one state to another.
state table
A grid showing the resulting transitions for each state combined with each possible event, showing both valid and invalid transitions.

state transition
A transition between two states of a component or system.

state transition testing
See Also: N-switch testing
Synonyms: finite state testing
A black-box test technique using a state transition diagram or state table to derive test cases to evaluate whether the test item successfully executes valid transitions and blocks invalid transitions.

statement
Synonyms: source statement
An entity in a programming language, which is typically the smallest indivisible unit of execution.

statement coverage
The percentage of executable statements that have been exercised by a test suite.

statement testing
A white-box test technique in which test cases are designed to execute statements.

static analysis
Ref: After ISO 24765
The process of evaluating a component or system without executing it, based on its form, structure, content, or documentation.

static analyzer
Synonyms: analyzer, static analysis tool
A tool that carries out static analysis.

static code analysis
Analysis of source code carried out without execution of that software.

static testing
Testing a work product without code being executed.

statistical testing
See Also: operational profile testing
A test design technique in which a model of the statistical distribution of the input is used to construct representative test cases.
status accounting

Ref: IEEE 610

An element of configuration management consisting of the recording and reporting of information needed to manage a configuration effectively. This information includes a listing of the approved configuration identification, the status of proposed changes to the configuration, and the implementation status of the approved changes.

stress testing

Ref: ISO 24765  See Also: performance testing, load testing

A type of performance testing conducted to evaluate a system or component at or beyond the limits of its anticipated or specified workloads, or with reduced availability of resources such as access to memory or servers.

stress testing tool

A tool that supports stress testing.

structural coverage

Coverage measures based on the internal structure of a component or system.

structured scripting

A scripting technique that builds and utilizes a library of reusable (parts of) scripts.

stub

Ref: After IEEE 610

A skeletal or special-purpose implementation of a software component, used to develop or test a component that calls or is otherwise dependent on it. It replaces a called component.

subpath

A sequence of executable statements within a component.

suitability

Ref: ISO 9126  See Also: functionality

The capability of the software product to provide an appropriate set of functions for specified tasks and user objectives.

suitability testing

Testing to determine the suitability of a software product.

summative evaluation

See Also: formative evaluation, testing

A type of evaluation designed and used to gather conclusions about the quality of a component or system, especially when a substantial part of it has completed design.

suspension criteria

Ref: After IEEE 829

The criteria used to (temporarily) stop all or a portion of the testing activities on the test items.
syntax testing
A black-box test design technique in which test cases are designed based upon the definition of the input domain and/or output domain.

system
Ref: After ISO 24765
A collection of interacting elements organized to accomplish a specific function or set of functions.

system hardening
The step-by-step process of reducing the security vulnerabilities of a system by applying a security policy and different layers of protection.

System Integration Testing
Testing the combination and interaction of systems.

system of systems
Multiple heterogeneous, distributed systems that are embedded in networks at multiple levels and in multiple interconnected domains, addressing large-scale inter-disciplinary common problems and purposes, usually without a common management structure.

system testing
Ref: Hetzel
Testing an integrated system to verify that it meets specified requirements.

system under test (SUT)
A type of test object that is a system.

System Usability Scale (SUS)
A simple, ten-item attitude scale giving a global view of subjective assessments of usability.

Systematic Test and Evaluation Process (STEP)
See Also: content-based model
A structured testing methodology also used as a content-based model for improving the testing process. It does not require that improvements occur in a specific order.

technical review
Ref: Gilb and Graham, IEEE 1028
A formal review type by a team of technically-qualified personnel that examines the suitability of a work product for its intended use and identifies discrepancies from specifications and standards.

test
A set of one or more test cases.

test adaptation layer
The layer in a test automation architecture which provides the necessary code to adapt test scripts on an abstract level to the various components, configuration or interfaces of the SUT.
test analysis
The activity that identifies test conditions by analyzing the test basis.

test approach
The implementation of the test strategy for a specific project.

test architect
(1) A person who provides guidance and strategic direction for a test organization and for its relationship with other disciplines. (2) A person who defines the way testing is structured for a given system, including topics such as test tools and test data management.

test automation
The use of software to perform or support test activities, e.g., test management, test design, test execution and results checking.

test automation architecture
An instantiation of the generic test automation architecture to define the architecture of a test automation solution, i.e., its layers, components, services and interfaces.

test automation engineer
A person who is responsible for the design, implementation and maintenance of a test automation architecture as well as the technical evolution of the resulting test automation solution.

test automation framework
A tool that provides an environment for test automation. It usually includes a test harness and test libraries.

test automation manager
A person who is responsible for the planning and supervision of the development and evolution of a test automation solution.

test automation solution
A realization/implementation of a test automation architecture, i.e., a combination of components implementing a specific test automation assignment. The components may include commercial off-the-shelf test tools, test automation frameworks, as well as test hardware.

test automation strategy
A high-level plan to achieve long-term objectives of test automation under given boundary conditions.

test basis
Ref: After TMap
The body of knowledge used as the basis for test analysis and design.

test case
Ref: After ISO 29119
A set of preconditions, inputs, actions (where applicable), expected results and postconditions, developed based on test conditions.
test case explosion

The disproportionate growth of the number of test cases with growing size of the test basis, when using a certain test design technique. Test case explosion may also happen when applying the test design technique systematically for the first time.

test case result

The final verdict on the execution of a test and its outcomes, such as pass, fail, or error. The result of error is used for situations where it is not clear whether the problem is in the test object.

test case specification

Ref: ISO 29119  See Also: test specification

Documentation of a set of one or more test cases.

test charter

See Also: exploratory testing

Synonyms: charter

Documentation of test activities in session-based exploratory testing.

test closure

See Also: test process

During the test closure phase of a test process data is collected from completed activities to consolidate experience, testware, facts and numbers. The test closure phase consists of finalizing and archiving the testware and evaluating the test process, including preparation of a test evaluation report.

test comparator

Synonyms: comparator

A test tool to perform automated test comparison of actual results with expected results.

test comparison

The process of identifying differences between the actual results produced by the component or system under test and the expected results for a test. Test comparison can be performed during test execution (dynamic comparison) or after test execution.

test completion

Ref: After ISO 29119

The activity that makes test assets available for later use, leaves test environments in a satisfactory condition and communicates the results of testing to relevant stakeholders.

test condition

Synonyms: test requirement, test situation

An aspect of the test basis that is relevant in order to achieve specific test objectives.

test control

See Also: test management

A test management task that deals with developing and applying a set of corrective actions to get a test project on track when monitoring shows a deviation from what was planned.
**test cycle**

Execution of the test process against a single identifiable release of the test object.

**test data**

Ref: After ISO 29119

Data created or selected to satisfy the execution preconditions and inputs to execute one or more test cases.

**test data management**

The process of analyzing test data requirements, designing test data structures, creating and maintaining test data.

**test data preparation tool**

**Synonyms:** test generator

A type of test tool that enables data to be selected from existing databases or created, generated, manipulated and edited for use in testing.

**test definition layer**

The layer in a generic test automation architecture which supports test implementation by supporting the definition of test suites and/or test cases, e.g., by offering templates or guidelines.

**test design**

Ref: After ISO 29119  See Also: test design specification

The activity of deriving and specifying test cases from test conditions.

**test design specification**

Ref: ISO 29119  See Also: test specification

Documentation specifying the features to be tested and their corresponding test conditions.

**test design tool**

A tool that supports the test design activity by generating test inputs from a specification that may be held in a CASE tool repository, e.g., requirements management tool, from specified test conditions held in the tool itself, or from code.

**test director**

See Also: test manager

A senior manager who manages test managers.

**test environment**

Ref: ISO 24765  Synonyms: test bed, test rig

An environment containing hardware, instrumentation, simulators, software tools, and other support elements needed to conduct a test.

**test estimation**

The calculated approximation of a result related to various aspects of testing (e.g., effort spent, completion date, costs involved, number of test cases, etc.) which is usable even if input data may be incomplete, uncertain, or noisy.
test evaluation report

A document produced at the end of the test process summarizing all testing activities and results. It also contains an evaluation of the test process and lessons learned.

test execution

The process of running a test on the component or system under test, producing actual result(s).

test execution automation

The use of software, e.g., capture/playback tools, to control the execution of tests, the comparison of actual results to expected results, the setting up of test preconditions, and other test control and reporting functions.

test execution layer

The layer in a generic test automation architecture which supports the execution of test suites and/or test cases.

test execution phase

Ref: IEEE 610

The period of time in a software development lifecycle during which the components of a software product are executed, and the software product is evaluated to determine whether or not requirements have been satisfied.

test execution schedule

A schedule for the execution of test suites within a test cycle.

test execution technique

The method used to perform the actual test execution, either manual or automated.

test execution tool

A test tool that executes tests against a designated test item and evaluates the outcomes against expected results and postconditions.

test generation layer

The layer in a generic test automation architecture which supports manual or automated design of test suites and/or test cases.

test harness

A test environment comprised of stubs and drivers needed to execute a test.

test hook

A customized software interface that enables automated testing of a test object.

test implementation

The activity that prepares the testware needed for test execution based on test analysis and design.
test improvement plan

Ref: After CMMI

A plan for achieving organizational test process improvement objectives based on a thorough understanding of the current strengths and weaknesses of the organization's test processes and test process assets.

test infrastructure

The organizational artifacts needed to perform testing, consisting of test environments, test tools, office environment and procedures.

test input

The data received from an external source by the test object during test execution. The external source can be hardware, software or human.

test item

See Also: test object

A part of a test object used in the test process.

test leader

See Also: test manager

Synonyms: lead tester

On large projects, the person who reports to the test manager and is responsible for project management of a particular test level or a particular set of testing activities.

test level

Ref: After ISO 29119

Synonyms: test stage

A specific instantiation of a test process.

test log

Ref: ISO 24765

Synonyms: test record, test run log

A chronological record of relevant details about the execution of tests.

test logging

Synonyms: test recording

The activity of creating a test log.

test management

Ref: ISO 29119

The planning, scheduling, estimating, monitoring, reporting, control and completion of test activities.

test management tool

A tool that provides support to the test management and control part of a test process. It often has several capabilities, such as testware management, scheduling of tests, test logging of results, progress tracking, incident management and test reporting.
test manager

The person responsible for project management of testing activities and resources, and evaluation of a test object. The individual who directs, controls, administers, plans and regulates the evaluation of a test object.

Test Maturity Model integration (TMMi)

A five-level staged framework for test process improvement, related to the Capability Maturity Model Integration (CMMI), that describes the key elements of an effective test process.

test mission

See Also: test policy

The purpose of testing for an organization, often documented as part of the test policy.

test model

A model describing testware that is used for testing a component or a system under test.

test monitoring

See Also: test management

A test management activity that involves checking the status of testing activities, identifying any variances from the planned or expected status, and reporting status to stakeholders.

test object

See Also: test item

The component or system to be tested.

test objective

A reason or purpose for designing and executing a test.

test oracle

Ref: After Adrion

Synonyms: oracle

A source to determine expected results to compare with the actual result of the system under test.

test performance indicator

A high-level metric of effectiveness and/or efficiency used to guide and control progressive test development, e.g., Defect Detection Percentage (DDP).

test phase

Ref: After Gerrard

A distinct set of test activities collected into a manageable phase of a project, e.g., the execution activities of a test level.

test plan

Ref: After ISO 29119

Documentation describing the test objectives to be achieved and the means and the schedule for achieving them, organized to coordinate testing activities.
test planning

The activity of establishing or updating a test plan.

Test Point Analysis (TPA)

Ref: TMap

A formula based test estimation method based on function point analysis.

test policy

Synonyms: organizational test policy

A high-level document describing the principles, approach and major objectives of the organization regarding testing.

test procedure

Ref: ISO 29119  See Also: test script

A sequence of test cases in execution order, and any associated actions that may be required to set up the initial preconditions and any wrap up activities post execution.

test procedure specification

Ref: After ISO 29119  See Also: test specification

Synonyms: test procedure , test scenario

Documentation specifying one or more test procedures.

test process

The set of interrelated activities comprising of test planning, test monitoring and control, test analysis, test design, test implementation, test execution, and test completion.

test process group (TPG)

Ref: After CMMI

A collection of (test) specialists who facilitate the definition, maintenance, and improvement of the test processes used by an organization.

test process improvement

Ref: After CMMI

A program of activities designed to improve the performance and maturity of the organization’s test processes and the results of such a program.

test process improvement manifesto

Ref: Veenendaal08

A statement that echoes the Agile manifesto, and defines values for improving the testing process. The values are: flexibility over detailed processes, best practices over templates, deployment orientation over process orientation, peer reviews over quality assurance (departments), business driven over model-driven.

test process improver

A person implementing improvements in the test process based on a test improvement plan.

test progress report

Synonyms: test status report

A test report produced at regular intervals about the progress of test activities against a baseline, risks, and alternatives requiring a decision.
test report
Documentation summarizing test activities and results.

See Also: test process
Collecting and analyzing data from testing activities and subsequently consolidating the data in a report to inform stakeholders.

test reproducibility
An attribute of a test indicating whether the same results are produced each time the test is executed.

test run
Execution of a test on a specific version of the test object.

test schedule
A list of activities, tasks or events of the test process, identifying their intended start and finish dates and/or times, and interdependencies.

test script
See Also: test procedure
A sequence of instructions for the execution of a test.

test selection criteria
The criteria used to guide the generation of test cases or to select test cases in order to limit the size of a test.

test session
See Also: exploratory testing
An uninterrupted period of time spent in executing tests. In exploratory testing, each test session is focused on a charter, but testers can also explore new opportunities or issues during a session. The tester creates and executes on the fly and records their progress.

test specification
Ref: ISO 29119
The complete documentation of the test design, test cases and test procedures for a specific test item.

test strategy
Ref: After ISO 29119
Synonyms: organizational test strategy
Documentation that expresses the generic requirements for testing one or more projects run within an organization, providing detail on how testing is to be performed, and is aligned with the test policy.

test suite
Synonyms: test case suite, test set
A set of test cases or test procedures to be executed in a specific test cycle.
test summary report

Ref: ISO 29119

Synonyms: test report

A test report that provides an evaluation of the corresponding test items against exit criteria.

test technique

Synonyms: test case design technique, test specification technique, test technique, test design technique

A procedure used to derive and/or select test cases.

test tool

Ref: TMap  See Also: CAST

A software product that supports one or more test activities, such as planning and control, specification, building initial files and data, test execution and test analysis.

test type

Ref: After TMap

A group of test activities based on specific test objectives aimed at specific characteristics of a component or system.

test-driven development (TDD)

A way of developing software where the test cases are developed, and often automated, before the software is developed to run those test cases.

test-first development

See Also: test-driven development

The practice of designing tests based on the specification of a test item before developing the corresponding test item.

testability

Ref: After ISO 25010

The degree of effectiveness and efficiency with which tests can be designed and executed for a component or system.

testability review

Ref: After TMap

A review to evaluate the testability of the test basis.

testable requirement

Ref: After IEEE 610

A requirements that is stated in terms that permit establishment of test designs (and subsequently test cases) and execution of tests to determine whether the requirement has been met.

tester

A skilled professional who is involved in the testing of a component or system.
testing

The process consisting of all lifecycle activities, both static and dynamic, concerned with planning, preparation and evaluation of software products and related work products determine that they satisfy specified requirements, to demonstrate that they are fit for purpose and to detect defects.

testware

Ref: After ISO 29119

Work products produced during the test process for use in planning, designing, executing, evaluating and reporting on testing.

think aloud usability testing

A usability testing technique where test participants share their thoughts with the moderator and observers by thinking aloud while they solve usability test tasks. Think aloud is useful to understand the test participant

thread testing

An approach to component integration testing where the progressive integration of components follows the implementation of subsets of the requirements, as opposed to the integration of components by levels of a hierarchy.

three-point estimation

A test estimation method using estimated values for the “best case”, “worst case”, and “most likely case” of the matter being estimated, to define the degree of certainty associated with the resultant estimate.

top-down testing

See Also: integration testing

An incremental approach to integration testing where the component at the top of the component hierarchy is tested first, with lower level components being simulated by stubs. Tested components are then used to test lower level components. The process is repeated until the lowest level components have been tested.

Total Quality Management (TQM)

Ref: After ISO 8402

An organization-wide management approach centered on quality, based on the participation of all members of the organization and aiming at long-term success through customer satisfaction, and benefits to all members of the organization and to society. Total Quality Management consists of planning, organizing, directing, control, and assurance.

TPI Next

A continuous business-driven framework for test process improvement that describes the key elements of an effective and efficient test process.

traceability

Ref: After ISO 19506  See Also: horizontal traceability, vertical traceability

The degree to which a relationship can be established between two or more work products.

traceability matrix

A two-dimensional table, which correlates two entities (e.g., requirements and test cases). The table allows tracing back and forth the links of one entity to the other, thus enabling the determination of coverage achieved and the assessment of impact of proposed changes.

transactional analysis

The analysis of transactions between people and within people’s minds; a transaction is defined as a stimulus plus a response. Transactions take place between people and between the ego states (personality segments) within one person’s mind.
transcendent-based quality

Ref: After Garvin  See Also: manufacturing-based quality, product-based quality, user-based quality, value-based quality

A view of quality, wherein quality cannot be precisely defined, but we know it when we see it, or are aware of its absence when it is missing. Quality depends on the perceptio and affective feelings of an individual or group of individuals toward a product.

understandability

Ref: ISO 9126  See Also: usability

The capability of the software product to enable the user to understand whether the software is suitable, and how it can be used for particular tasks and conditions of use.

unit test framework

Ref: Graham

A tool that provides an environment for unit or component testing in which a component can be tested in isolation or with suitable stubs and drivers. It also provides other support for the developer, such as debugging capabilities.

unreachable code

Synonyms: dead code

Code that cannot be reached and therefore is impossible to execute.

usability

Ref: After ISO 25010

The degree to which a component or system can be used by specified users to achieve specified goals in a specified context of use.

usability evaluation

See Also: formative evaluation, summative evaluation

A process through which information about the usability of a system is gathered in order to improve the system (known as formative evaluation) or to assess the merit or worth of a system (known as summative evaluation).

usability requirement

A requirement on the usability of a component or system.

usability test participant

A representative user who solves typical tasks in a usability test.

usability test script

See Also: test procedure specification

A document specifying a sequence of actions for the execution of a usability test. It is used by the moderator to keep track of briefing and pre-session interview questions, usability test tasks, and post-session interview questions.

usability test session

A test session in usability testing in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers.
usability test task
A usability test execution activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.

usability testing
Ref: After ISO 25010
Testing to evaluate the degree to which the system can be used by specified users with effectiveness, efficiency and satisfaction in a specified context of use.

use case
A sequence of transactions in a dialogue between an actor and a component or system with a tangible result, where an actor can be a user or anything that can exchange information with the system.

use case testing
Synonyms: scenario testing, user scenario testing
A black-box test technique in which test cases are designed to execute scenarios of use cases.

user acceptance testing
See Also: acceptance testing
Acceptance testing conducted in a real or simulated operational environment by intended users focusing their needs, requirements and business processes.

user experience
Ref: ISO 9241-210
A person's perceptions and responses resulting from the use or anticipated use of a software product.

user interface
All components of a system that provide information and controls for the user to accomplish specific tasks with the system.

user interface guideline
A low-level, specific rule or recommendation for user interface design that leaves little room for interpretation so designers implement it similarly. It is often used to ensure consistency in the appearance and behavior of the user interface of the systems produced by an organization.

user story
See Also: Agile software development, requirement
A high-level user or business requirement commonly used in Agile software development, typically consisting of one sentence in the everyday or business language capturing what functionality a user needs and the reason behind this, any non-functional criteria, and also includes acceptance criteria.

user story testing
See Also: user story
A black-box test design technique in which test cases are designed based on user stories to verify their correct implementation.

user survey
A usability evaluation whereby a representative sample of users are asked to report subjective evaluation into a questionnaire based on their experience in using a component or system.
user test
A test whereby real-life users are involved to evaluate the usability of a component or system.

user-based quality
Ref: after Garvin  See Also: manufacturing-based quality, product-based quality, transcendent-based quality, value-based quality
A view of quality, wherein quality is the capacity to satisfy needs, wants and desires of the user(s). A product or service that does not fulfill user needs is unlikely to find any users. This is a context dependent, contingent approach to quality since different business characteristics require different qualities of a product.

V-model
A sequential development lifecycle model describing a one-for-one relationship between major phases of software development from business requirements specification to delivery, and corresponding test levels from acceptance testing to component testing.

validation
Ref: ISO 9000
Confirmation by examination and through provision of objective evidence that the requirements for a specific intended use or application have been fulfilled.

value-based quality
Ref: After Garvin  See Also: manufacturing-based quality, product-based quality, transcendent-based quality, user-based quality
A view of quality wherein quality is defined by price. A quality product or service is one that provides desired performance at an acceptable cost. Quality is determined by means of a decision process with stakeholders on trade-offs between time, effort and cost aspects.

variable
An element of storage in a computer that is accessible by a software program by referring to it by a name.

verification
Ref: ISO 9000
Confirmation by examination and through provision of objective evidence that specified requirements have been fulfilled.

vertical traceability
The tracing of requirements through the layers of development documentation to components.

volume testing
See Also: resource-utilization testing
Testing where the system is subjected to large volumes of data.

vulnerability scanner
A static analyzer that is used to detect particular security vulnerabilities in the code.

walkthrough
Ref: After ISO 20246  See Also: peer review
Synonyms: structured walkthrough
A type of review in which an author leads members of the review through a work product and the members ask questions and make comments about possible issues.
Web Content Accessibility Guidelines (WCAG)

A part of a series of web accessibility guidelines published by the Web Accessibility Initiative (WAI) of the World Wide Web Consortium (W3C), the main international standards organization for the internet. They consist of a set of guidelines for making content accessible, primarily for people with disabilities.

Website Analysis and Measurement Inventory (WAMMI)

A questionnaire-based usability test technique for measuring web site software quality from the end user's point of view.

white-box test technique

Synonyms: structural test technique, structure-based test technique, structure-based technique, white-box technique

A procedure to derive and/or select test cases based on an analysis of the internal structure of a component or system.

white-box testing

Synonyms: clear-box testing, code-based testing, glass-box testing, logic-coverage testing, logic-driven testing, structural testing, structure-based testing

Testing based on an analysis of the internal structure of the component or system.

Wideband Delphi

An expert-based test estimation technique that aims at making an accurate estimation using the collective wisdom of the team members.

wild pointer

See Also: pointer

A pointer that references a location that is out of scope for that pointer or that does not exist.

work breakdown structure (WBS)

Ref: PMBOK

Deliverable oriented hierarchical decomposition of the work to be executed by the project team to accomplish the project objectives (according to PMBOK).
